

A hand holding a black rugged handheld device, possibly a barcode scanner or a rugged smartphone. The device has a red laser light at the front and an orange button on the side. The background is a blurred indoor setting with shelves and lights. The image is overlaid with a yellow geometric shape in the top right corner.

WAREHOUSE PRODUCTIVITY

Warehouse workflows that involve a traditional handheld devices experience a major productivity flaw: **The moment the device is put down** to handle either the product or machinery such as a trolley or truck. This can result in **1 hour of lost productivity** per employee shift.

Save 6 seconds per scan!

There are two further hidden costs. First, handling a device increases the likelihood of damage from dropping, resulting in both **downtime and maintenance costs**. Second, the all-too-common “where did I leave it” resulting in **lost employee productivity**.

Wearable Scanners are a **low cost drop-in solution** that can be paired with your existing equipment including smartphones, rugged handhelds, tablets, desktops and vehicle computers to enhance productivity across all phases of warehouse operations.

Conker Wearable Scanners are available with a wide range of scan engines include 1D laser and Ultra Long Range up to 14 metres. Long range scanning be useful for high shelves and to avoid stepping down from a forklift to scan.

Four different glove types are available: stretch grip material (pictured), PU leather, PU leather open-palm for use over existing PPE and a washable Alcantra.

CONKER BG

- 1D, 2D, Long Range
- Bluetooth + NFC
- 85 grams, IP65
- 4 gloves types

CONKER SW9
